

OLPC

olpc Standard Colors

COLOR NAME	dark	medium	light
RED	#D00000	#FF0000	#FFA000
ORANGE	#D00000	#FF0000	#FFA000
YELLOW	#D00000	#FF0000	#FFA000
GREEN	#008000	#00FF00	#00FF00
BLUE	#0000FF	#0000FF	#0000FF
PURPLE	#800080	#800080	#800080

[edit] xcolor.py

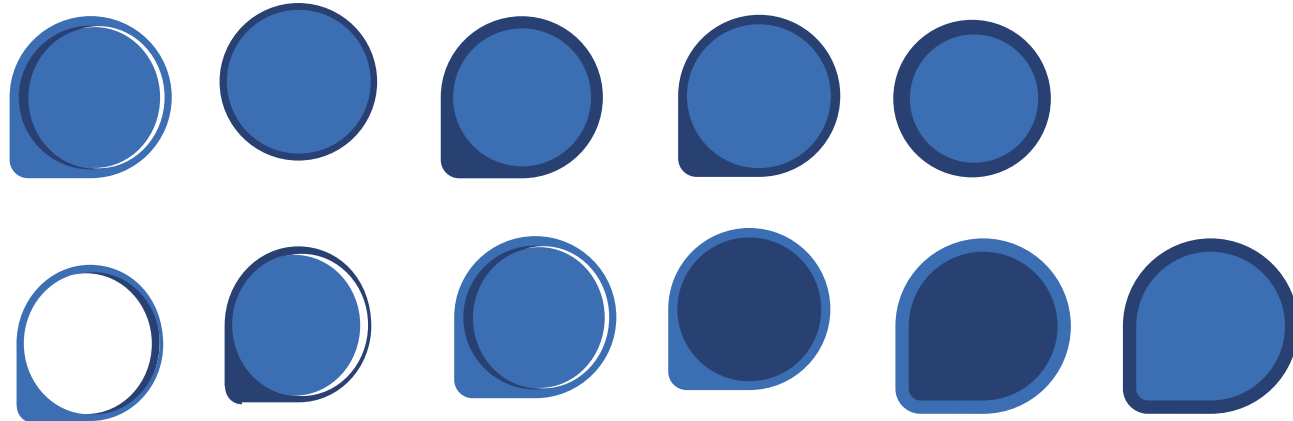

There are 27 different colors used for logo colors. Each I /usr/lib/python2.7/site-packages/xcolor/graphics/xcolor.py

NOTE: these values are not current. -0.12.0.112.1

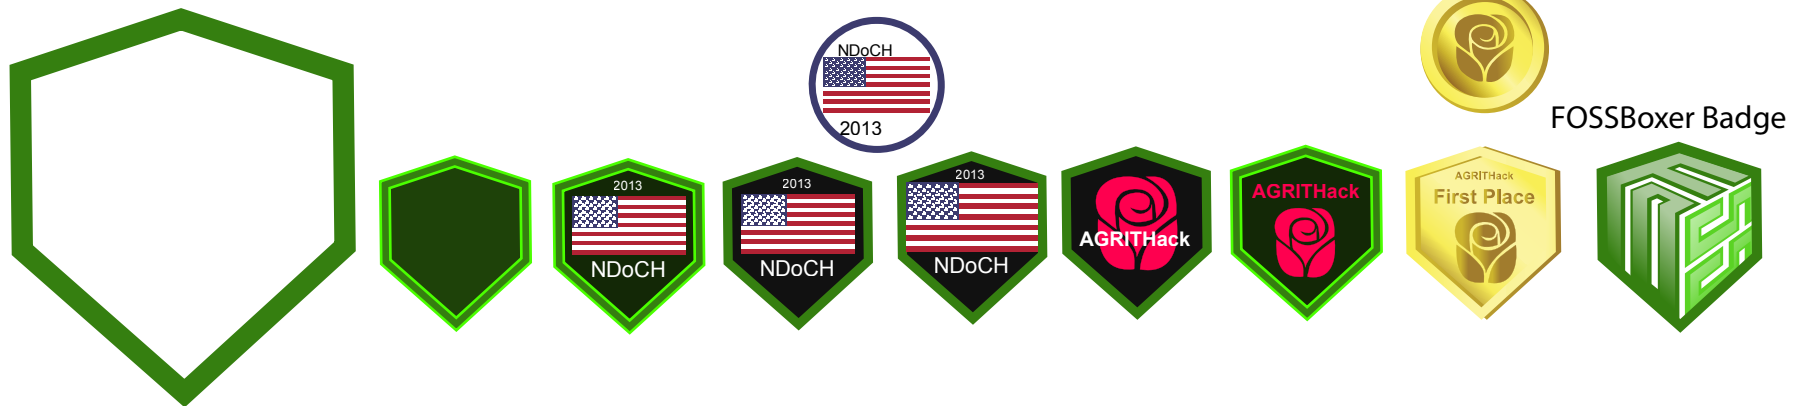

Fedora

it may be cool if we use that extra corner to tell what kind of badge it is (art, code, community, etc)

FossRIT

Badge design standards:

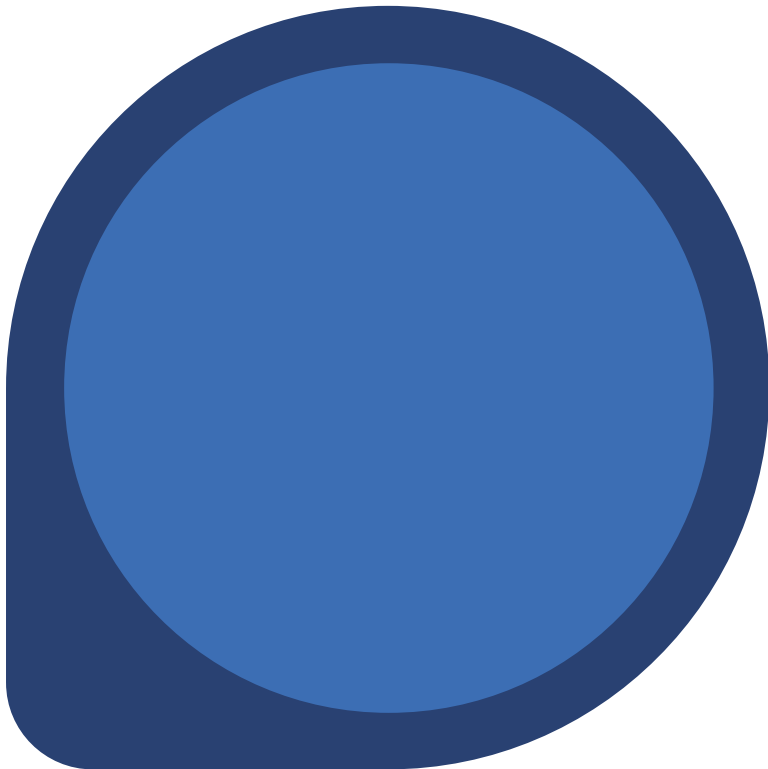

Each “company” (OLPC, Fedora, FOSS@RIT) has its own shape for all the badges they give out. This shape is based off their logo, or the look of their designs.

If someone wants to create a badge that deviates from the standard shape, they must use the logos colors to help them fit in with the other badges. Each company has colors and fonts used consistently on the badges.

Note: I think it is okay for a company to have standard colors or standard shape. It does not need to have both, but if there will be deviations from one, the badge design must stick to the other standard. (I imagine Fedora may be stricter than FOSS@RIT)

Example Template (svg provided)

Fedora

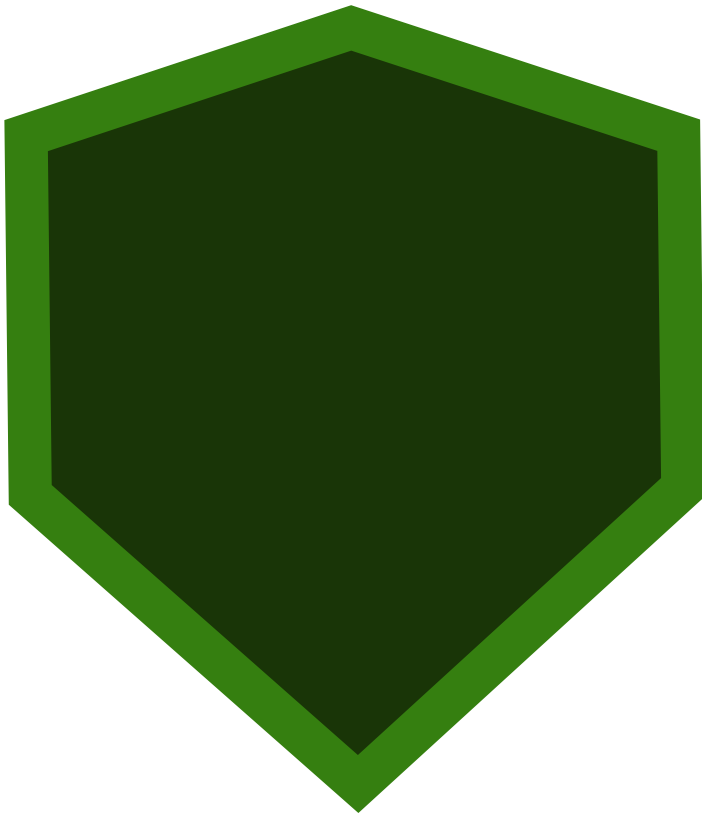

Font=comfortaa

Colors

Would have # undernath

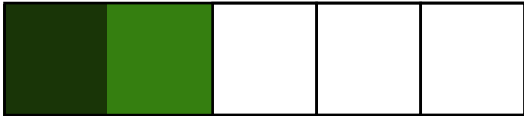

FossRIT

Font1=VDS

Font2=jura

Colors

Would have # undernath
